

Agenda

- ① Git
- ② Github
- ③ Terminologies (Project) - Push, Pull, Commit
- ④ Branching
- ⑤ Conflict Resolution
- ⑥ Contribute to open source projects

GITHUB

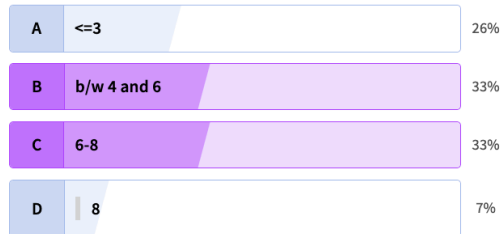

is this lecture rightly placed, shouldn't this be at beginning of course ideally ? or there any nuances with mlops ?

GIT - Open Source Version Control System

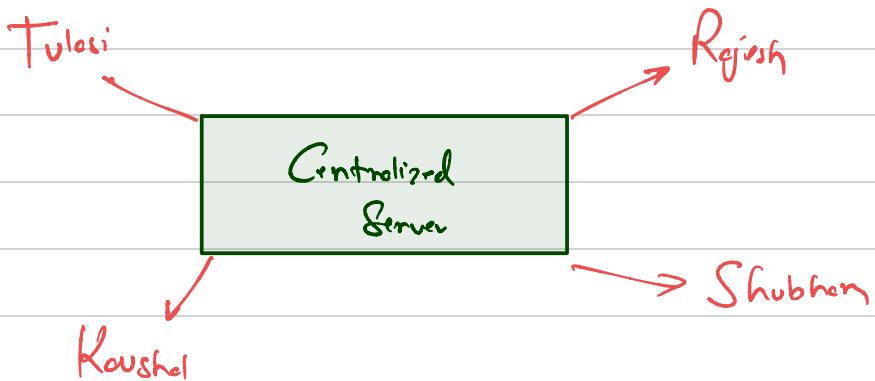

Email → Gmail
Yahoo
Zepel
Proton

GIT → Github (Microsoft)
Gitlab (Gitlab)
Bitbucket (Atlassian)
Code-Commit (AWS)

Different types of version control system.

Centralized version control system.

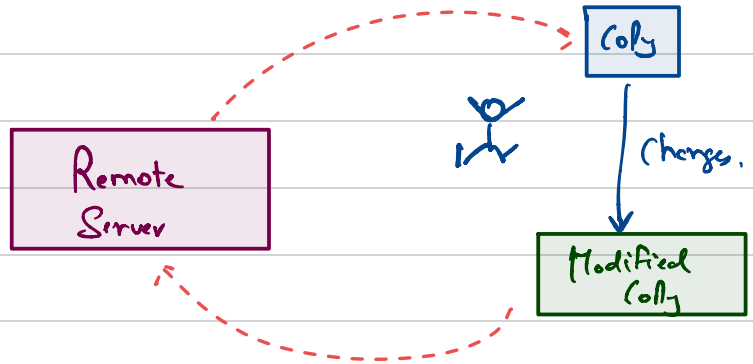

Pros:

1. Maximum/High Security.
2. I know exactly who logged in when, and did what changes.
3. No conflict.
4. Real time Update and monitoring.

Cons:

1. Central Point of Failure.
2. Not Scalable.
3. No offline capabilities.

Distributed version control system.

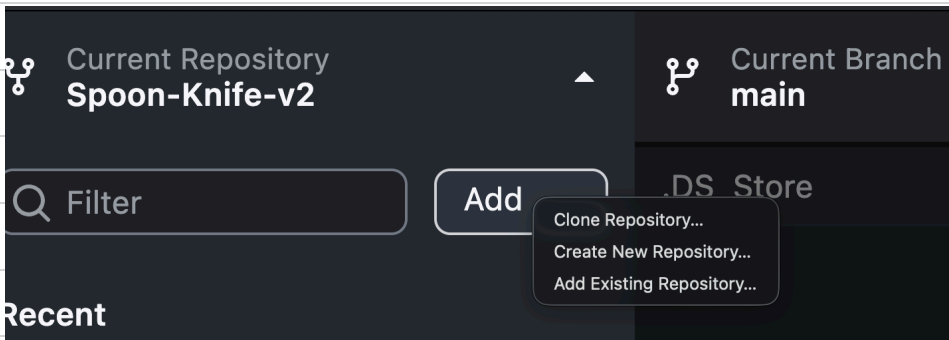

GIT Terminologies

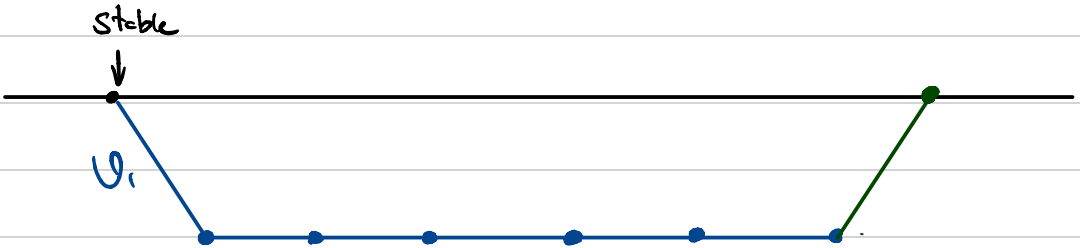

1. Repository: Fancy word for a folder, contains code/documents, etc.
2. Local Repository: Folders on my local computer, that may/may not have synced to the remote repository.
3. Remote Repository: Online copy of my codebase.

Commands

1. Add: Add file/file(s) to staging area.
2. Commit: Save current-snapshot of codebase.
3. Fetch: Get the most recent changes from the remote repository.
4. Pull: This command updates the local repo with remote repo.
5. Push: You update remote repo, with new changes from local. h

Branches

Pull request means you request the owner of master branch to pull your current code from your branch into the master branch. Why it is called a pull request.

 **README**

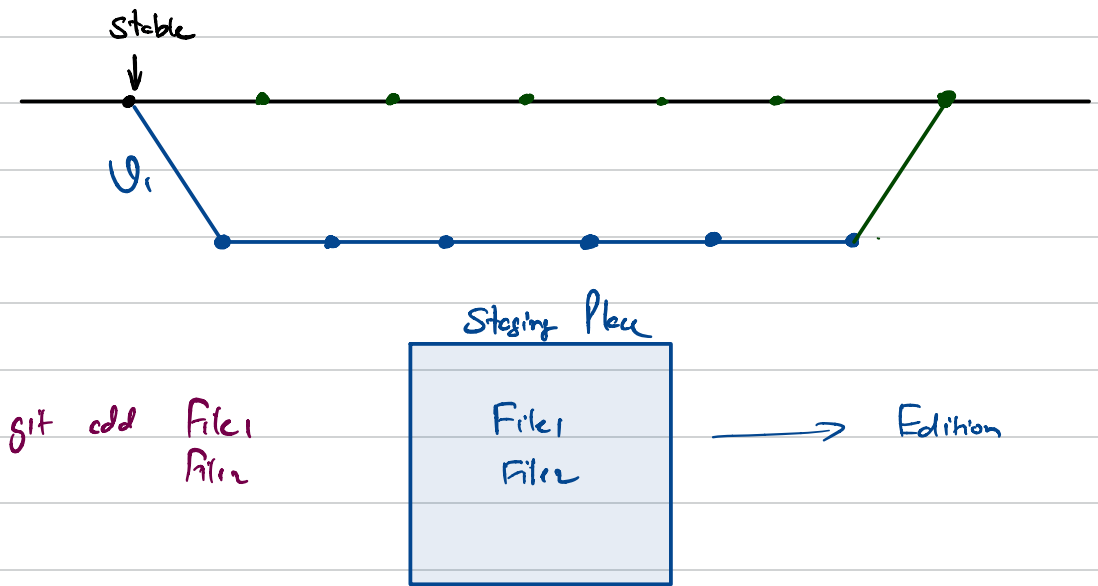

This is empty file with no content.

How to do open source contribution.

can we let AI to contribute to open source repos entirely? Is it happening already?

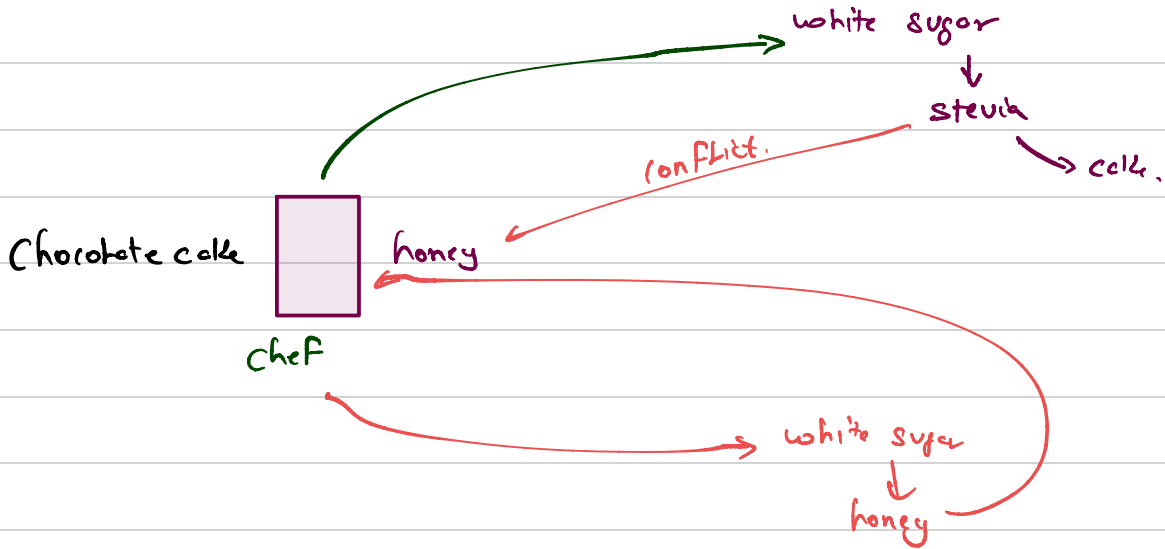

ADD → **COMMIT** → **PUSH**

once we choose some issue for a open source contributio.
how to go ahead in fixing it.
have it locally, understand the code fix it, test locally
and push the code for a PR?

What are conflicts and how to resolve conflicts?

gradio, flask, fastapi, streamlit.
